**OBJECTIVE:** To be the best person i can be on the job and life, flexible honest, Team Player, raised on ranch, with broad ranging experience within a laboratory, and on a ranch, building fence, veterinary, tractors, front end buckets, shredders, manure spreaders, biology field work, including fisheries, marine rescue, and translocation of species. I also have experience in planting trees, hardwood cuttings, softwood cuttings, grafts, use of organic fertilizers, organic pesticides, soil amendments, wildlife management, management of organic farms, agricultural and landscape including arborist type work and several other types of medical environments. I am also capable of adapting to a changing environment, working alone, listening to new instructions and supervising of staff. I am Flexible, with good communication skills, and with a decent attitude and skills. Goals include doing the best I can with what is given and doing the best I can. Furthermore, have worked in research for over 10 years in the African bush which consisted of FDA drug trials and possible cures, for infectious agents like hiv, dengue fever, Ebola, and malaria and vectors. This included husbandry, lab work, Handling of many species, including, canine, ovine, swine, non-venomous, and venomous reptiles, etc. This also included a great deal of field work involving sometimes dangerous circumstances and times in the field laboratory setting up remote camps and bases. Furthermore, I also helped established protocols, SOPS, and dates of delivery of results, following budgets and protocols as needed.
